

# F C I

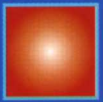

*Feeding Concepts, Inc.*

Sleek, responsive and innovative are how our customers describe Feeding Concepts, Inc. Our unique style, size and willingness to meet their most demanding application criteria has established Feeding Concepts as the leader in Feeder bowl assembly and technology. Our experienced team of bowl builders, assemblers and on staff engineers put your needs at the pinnacle of our work.

*Made in the USA*

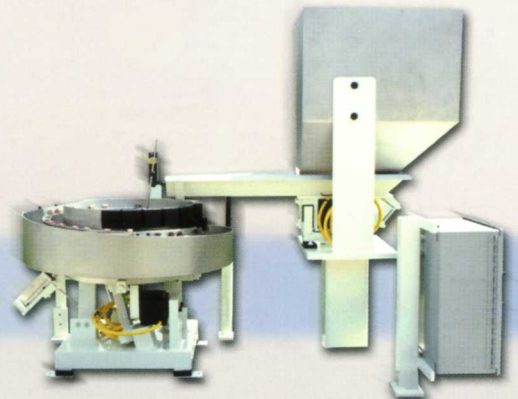

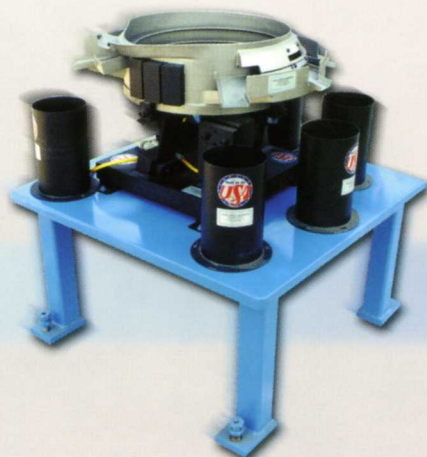

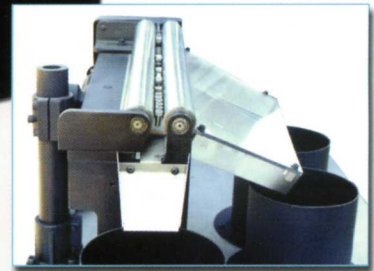

# Sleek

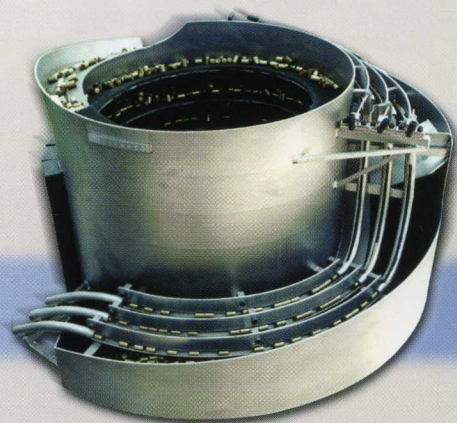

As an efficient shop and not part of a stayed, megolithic corporation, Feeding Concepts can literally turn on a dime. Quality and policy standards are set in place to insure success, but when the "better mousetrap" is found it is immediatly integrated into our style and approach of business. Because of our size, we use a "common sense" approach to all customer needs whether special or standard, we have the willingness and ability to conform to your specifications while others may not.

Sleek also refers to our line of centrifical feeding systems and hoppers. With part rates as high as 2,000 per minute, sleek takes on a whole new definition.

# Responsive

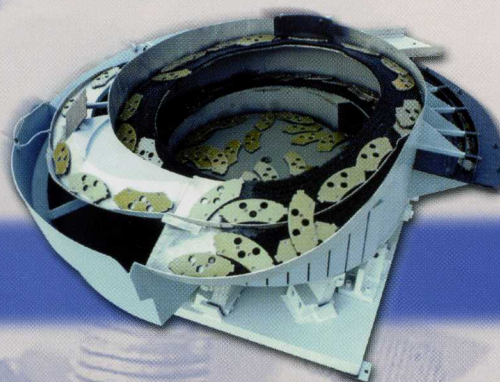

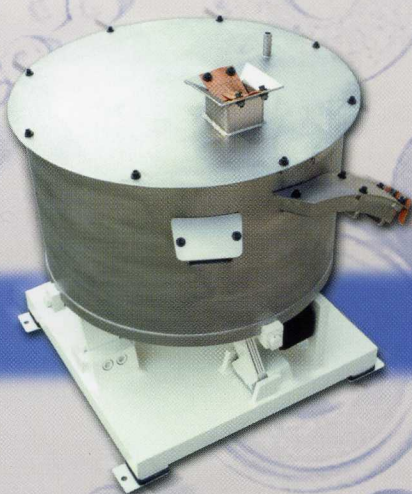

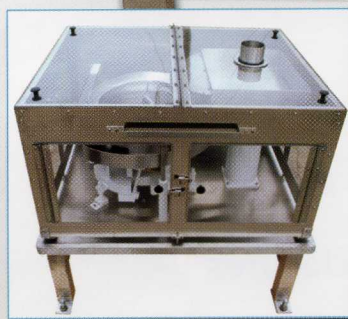

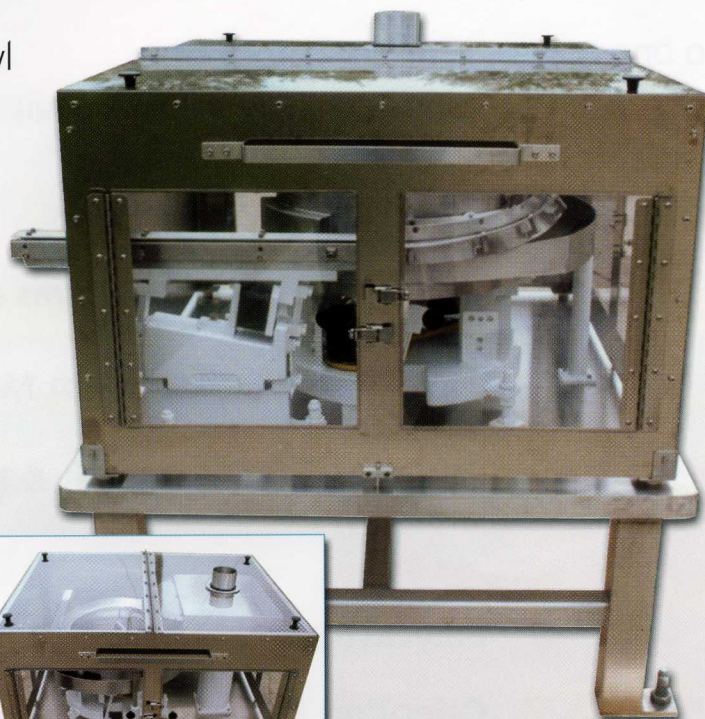

No one word describes Feeding Concepts more accurately than responsive. This is dramatically illustrated in our "Same day quoting" where you send us, either by fax, e-mail or phone, your specifications, and we will, within 24 hours have a completed quote returned to you. Further illustration is in our delivery time. We, in most cases, can cut in half, traditional feeding companies final product delivery time. If the age old adage is true that time is money, then Feeding Concepts is worth its weight in gold.

# Innovative

Setting the standard by which other bowl building companies are measured is becoming the norm at Feeding Concepts. Our quality and engineering are not only on the cutting edge, but honing it to razor sharpness. One innovation is our ability to have you view your "run offs" directly over the Internet. Your time and

dollars are not wasted by flying to watch your machine perform. From your own internet site, you can watch live, your parts being run and how efficiently and effectively your system works.

# *Capabilities*

No one is more capable than Feeding Concepts. Our services are specialized to suit your every need. Turn to FCI for Creative Concepts to Meet Your Automation Goals:
